

## Medium Voltage Storage & Deployment Solutions

Work safety requirements and the potential for natural disasters may dictate the need for a storage system designed to keep materials in optimal condition. TPC offers work trailer solutions that protect cable while in storage and ensure fast, easy, and safe deployment in temporary and emergency power situations. Customizable to match your unique needs, TPC engineers and product managers will work with you to deliver a trailer system that fits specifications for safety, theft prevention, ease of use, rapid deployment, and more. While the possibilities are endless, TPC is the constant — we are your single source from design to implementation.

### Custom Designed to Meet Your Needs

We offer custom-engineered trailer systems designed using specific application and environmental information supplied by our customers. These solutions represent a unique and valuable service offered by TPC, whose engineers are experienced in the electrical, mechanical, chemical, and industrial engineering disciplines. TPC engineers will assemble the critical components into a final design that delivers a long-lasting, cost-effective alternative to the constant replacement and grueling manual deployment of ordinary cable.
